TAYYAB DILAWAR

MERN Stack Developer | React Native Developer | AI-Assisted Development

Email: tayyabalidilawar@gmail.com | Phone: +92 307 7904836 | Location: Faisalabad, Pakistan

GitHub: Github | LinkedIn: LinkedIn | Portfolio: Portfolio

PROFESSIONAL SUMMARY

Full Stack Developer with 5+ years of experience designing, building, and scaling production web applications across the MERN stack and Next.js. Specialized in SSR/SSG for SEO-driven performance, secure authentication and database architecture, and RESTful API design with Node.js and Express.js. Also experienced in building cross-platform mobile applications using React Native, having independently designed and published a live application on the Google Play Store. Experienced deploying applications on AWS and Google Cloud, with a focus on Core Web Vitals, caching, and load-time optimization. Uses AI tools like Claude, Cursor, and Google Antigravity to build and ship web and mobile apps faster while keeping code quality high. Comfortable owning features end-to-end, from architecture through testing and deployment, while collaborating closely with product, design, and QA in agile teams.

AI & AI-ASSISTED DEVELOPMENT

- AI coding tools: Claude, Cursor, Google Antigravity, and AI-assisted IDE workflows for building full applications from idea to deployment.
- Rapid app and website development: Use AI to scaffold projects, generate components and API routes, build UIs from specs or designs, and iterate quickly on MERN, Next.js, and React Native apps.
- Prompt engineering: Write structured, context-rich prompts and project instructions to get reliable, consistent code and documentation from LLMs.
- AI for quality: Use AI to debug, refactor, review code, generate unit and integration tests, and explain unfamiliar codebases.
- Human-in-the-loop discipline: Review, test, and secure all AI-generated code before it ships, covering authentication, validation, performance, and accessibility.
- AI integration: Integrate LLM APIs into web applications for features such as chat, content generation, and summarization.

PROFESSIONAL EXPERIENCE

Full Stack Developer (MERN) | Maxenius *December 2024 - Present*

- Build and maintain scalable MERN web applications, applying modern React patterns and centralized state management to keep a growing codebase maintainable.
- Use AI tools (Claude, Cursor, Antigravity) across the development lifecycle to accelerate feature delivery, scaffolding, debugging, refactoring, and test creation, while reviewing every change for quality and security.
- Architect Next.js applications using Server-Side Rendering (SSR) and Static Site Generation (SSG), improving page load performance and organic SEO rankings for 30+ key pages.
- Implement secure authentication and real-time database features with Supabase, simplifying user data management across the platform.

- Reduce initial load time by 30% through code splitting, lazy loading, and caching strategies.
- Improve organic search visibility by optimizing meta tags, adding structured data, and hitting Core Web Vitals targets across all core pages.
- Partner with design, product, and QA in an agile workflow to ship new features on a regular release cadence.

Web Developer (MERN) | Webfix, Inc *August 2023 - November 2024*

- Architected and built RESTful APIs with Node.js and Express.js, powering seamless communication between frontend and backend for 10+ client applications.
- Wrote clean, tested, maintainable code across the stack, reducing production bugs and easing onboarding for new engineers.
- Deployed and managed applications on AWS and Google Cloud, maintaining high availability and supporting 1000+ concurrent users.

Web Developer (React) | Aliva Tech *April 2020 - May 2023*

- Owned development, testing, deployment, and maintenance for 5+ web applications.
- Shipped user-facing React.js features that measurably improved engagement and interface usability.
- Resolved complex application issues, improving system stability.

Web Developer Intern (React) | Brain Plow *January 2020 - April 2020*

- Built foundational skills across modern web development standards, tools, and workflows.
- Coded, tested and debugged components within a team, supporting project milestones.

TECHNICAL SKILLS

AI Tools & Practices: Claude, Cursor, Google Antigravity, Prompt Engineering, AI-Assisted Development, LLM API Integration, AI Code Review and Test Generation

Frontend: React.js, Next.js, TypeScript, JavaScript, HTML5, CSS3, Redux, Zustand

Mobile: React Native

Styling: Tailwind CSS, Bootstrap, Material UI, Chakra UI, Ant Design

Backend: Node.js, Express.js, RESTful APIs, Middleware, Authentication

Database: MongoDB, PostgreSQL, Supabase, Firebase

State Management: Redux, Zustand, React Context API

Cloud and DevOps: AWS, Google Cloud Platform, Git, GitHub, CI/CD Pipelines, Docker

Testing and Quality: Jest, React Testing Library, Postman, Debugging and Profiling

Architecture and Practices: SSR, SSG, RESTful API Design, Performance Optimization, SEO Implementation, Agile/Scrum

EDUCATION

BS in Computer Science, Government College University, 2020

FSc Pre-Engineering, Government Graduate College Samanabad, 2015
